SHORTENED STATUTORY PERIOD OF RESPONSE	NOTIFICATION DATE	DELIVERY MODE
3 MONTHS	03/02/2007	ELECTRONIC

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Notice of this Office communication was sent electronically on the above-indicated "Notification Date" and has a shortened statutory period for reply of 3 MONTHS from 03/02/2007.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

winstonhsu@naipo.com

**Office Action Summary**

Application No.

10/707,395

Applicant(s)

TSAI, MING-HSIEN

Examiner

Joseph Haley

Art Unit

2627

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 08 December 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-3, 5-10 and 12-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3, 5-10 and 12-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, 8-10, 15, 19 and 20 are rejected under 35 U.S.C. 103(a) as being obvious over Fukumoto et al. (US 6493296) in view of Kojima et al. (US 2002/0001282).

In regard to claims 1, 19 and 20, Fukumoto et al. teaches a tilt servo for adjusting a tilt angle between the optical disc and the object lens (column 7 lines 56-62); an optical electric integrated circuit (OEIC) for detecting light reflected from the optical disc (fig. 3); a DPD generator for generating a differential phase detection (DPD) signal according to the output of the OEIC (fig. 3 element 51); and a tilt search block receiving the DPD signal and being connected to the tilt servo, wherein the tilt search block controls the tilt servo to adjust the tilt angle between the optical disc and the object lens according to the DPD signal (column 7 lines 46-55) but does not control the tilt to the angle having the lowest amplitude DPD signal.

Kojima et al. teaches controlling the tilt to the angle having the lowest amplitude DPD signal (fig 4 and see paragraphs 41 and 42).

The two are analogous art because they both deal with the same field of invention of controlling tilt in optical media.

At the time of invention it would have been obvious to one of ordinary skill in the art to provide the apparatus of Fukumoto et al. with phase correction of Kojima et al. The rationale is as follows: At the time of invention it would have been obvious to provide the apparatus of Fukumoto et al. with phase correction of Kojima et al. because it would reduce the number of parts necessary to carry out tilt control.

In regard to claims 3 and 10, Fukumoto et al. teaches wherein the tilt search block further comprises an analog to digital converter to convert the DPD signal to a digital DPD signal, and the tilt search block controls the tilt servo to adjust the tilt angle between the optical disc and the object lens according to the digital DPD signal (see fig. 3, Fukumoto et al. teaches digital circuitry, therefore it is inherent that there is an A/D converter).

Method claims 8 and 9 are drawn to the method of using the corresponding apparatus claimed in claim 1. Therefore method claims 8 and 9 correspond to apparatus claim 1 and are rejected for the same reasons of anticipation as used above.

In regard to claims 15 and 17, Fukumoto et al. teaches wherein the tilt search block is further for finding the optimal tilt angle by comparing only different amplitudes of the signal corresponding to different tilt angles (figs. 4 and 5).

In regard to claims 16 and 18, see claim 9 rejection above.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fukumoto et al. and Kojima et al. in view of Scheffler (US 5021893).

In regard to claim 2, Fukumoto et al. and Kojima et al. teach all the elements of claim 2 except wherein the amplifier amplifies the signal to a maximum allowable input level.

Scheffler teaches wherein the amplifier amplifies the signal to a maximum allowable input level (column 8 lines 26-31).

The three are analogous art because they both deal with the same field of invention of recording data.

At the time of invention it would have been obvious to one of ordinary skill in the art to provide the apparatus of Fukumoto et al. and Kojima et al. with the amplifier of Scheffler. The rationale is as follows: At the time of invention it would have been obvious to provide the apparatus of Fukumoto et al. and Kojima et al. with the amplifier of Scheffler because using the maximum allowable input signal decreases the chance of an error.

Claims 5-7 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fukumoto et al. and Kojima et al. in view of Gleim (US 4888754).

In regard to claims 5-7 and 12-14, Fukumoto et al. and Kojima et al. teach all the elements of these claims except the use of coarse and fine adjustment of the tilt.

Gleim teaches the use of coarse and fine adjustment to control reproduction of data on an optical disc (column 1 lines 44-53).

The three are analogous art because they both deal with the same field of invention of reproducing from optical media.

At the time of invention it would have been obvious to one of ordinary skill in the art to provide the apparatus of Fukumoto et al. and Kojima et al. with the coarse and fine adjustment of Gleim. The rationale is as follows: At the time of invention it would have been obvious to provide the apparatus of Fukumoto et al. and Kojima et al. with the coarse and fine adjustment of Gleim because by using coarse and fine adjustment the tilt angle can be more accurately realized due to a specific servo that is designed for small movements.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-3 and 8-10 have been considered but are moot in view of the new ground(s) of rejection.

In regard to claims 5-7 and 12-14, applicant argues the coarse and fine adjustment mechanism of Gleim is different than the tilt search block of the applicant's claimed invention. However, the examiner maintains this rejection because the invention of Gleim and the applicant's invention, as claimed in claims 5-7 and 12-14, are the same thing. Gleim uses coarse adjustment to find a general area on the disc and fine adjustment to find a specific area on the disc. The applicant's invention does the same thing with angles. It would have been obvious to use this method of coarse and fine adjustment in Fukumoto et al. and Kojima et al. because Fukumoto et al. and Kojima et al. are trying to find the closest angle to what is required by their systems.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2627

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

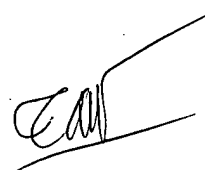

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Haley whose telephone number is 571-272-0574. The examiner can normally be reached on M-F 8:30am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Korzuch can be reached on 571-272-7589. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2627

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
